PROFESSIONAL SUMMARY

AI Product Engineer shipping production LLM applications, RAG pipelines, and full-stack AI products. Creator of **PRism AI** — a live automated PR review platform on the **Anthropic Claude API**, processing GitHub PR diffs in **<3 seconds** with zero production errors post-launch. Currently engineering **Ascend** — an AI habit intelligence app with OpenAI GPT-4o insights, XP/levels gamification, and emotional UX systems. Deep expertise in **LLM workflows, RAG architecture, vector search, prompt engineering**, and full-stack TypeScript/Python across production deployments.

PROJECTS

Ascend — AI Habit Intelligence App

Building · 2026

Stack: Next.js 15 · TypeScript · Supabase (PostgreSQL + Auth + Realtime) · OpenAI GPT-4o · Zustand · Prisma · Framer Motion · Tailwind CSS · PWA

- Engineering a full-stack AI habit app with an OpenAI GPT-4o weekly insight engine, gamification system (XP / levels / aura / mascot), and emotional UX — sole architect from Supabase schema design through PWA deployment.
- Designing Zustand state architecture with `persist + subscribeWithSelector` across 4 domain stores (user progress, habits, calories, UI); implementing real-time Supabase subscriptions with optimistic updates and race-condition-safe async flows.
- Building structured OpenAI prompt pipelines with Zod-validated JSON responses and per-user rate limiting to optimise API cost per request.

PRism AI — Production AI Code Review Platform

May 2026

GitHub 🔗 · Live Demo 🔗

Stack: Next.js 16 · TypeScript · Anthropic Claude API (claude-sonnet-4) · GitHub OAuth · NextAuth.js · Prisma ORM · Neon PostgreSQL · Vercel · Framer Motion · Tailwind CSS

- Engineered end-to-end LLM pipeline routing live GitHub PR diffs through prompt-optimised `claude-sonnet-4`, returning structured JSON risk findings (security / performance / code quality) in **<3s per review** — sole engineer, **zero production errors** since launch.
- Architected deterministic risk-classification engine (HIGH / MEDIUM / LOW) with configurable merge-blocking on critical findings; built full-stack TypeScript from schema design through Vercel CI/CD with **100% clean deploy rate**.
- Built GitHub OAuth + NextAuth.js + JWT auth backed by Neon serverless PostgreSQL via Prisma ORM; persisted all AI-generated review sessions with **zero 500-level errors since launch**.
- Shipped product-grade React dashboard (Framer Motion spring physics) — live PR queue, accordion findings panels, real-time per-repo settings; production UI, not a prototype.

DocMind — RAG Knowledge Engine with Semantic Search

2026

GitHub 🔗

Stack: FastAPI · Next.js · LangChain · FAISS · Sentence Transformers · Groq LLaMA 3.3 70B · Python

- Built production RAG inference engine: PDF ingestion → semantic chunking → Sentence Transformer embeddings → FAISS vector indexing → **sub-200ms** retrieval → hallucination-free LLM generation with cited answers.
- Engineered FastAPI + FAISS backend constraining Groq LLaMA 3.3 70B strictly to retrieved document context via prompt augmentation; delivered Next.js streaming chat UI with source-passage citation chips.

Dynamic Hand Gesture Recognition (WLASL / MediaPipe)

2025

GitHub 🔗

Stack: Python · MediaPipe · TensorFlow · Scikit-learn · OpenCV · WLASL Dataset

- Built a real-time sign-language recognition pipeline using MediaPipe's 21-point hand landmark detector to extract normalised spatial feature vectors from live webcam frames, feeding them into a custom-trained TensorFlow classifier with OpenCV preprocessing — full end-to-end inference with no server dependency.
- Validated model performance on the WLASL dataset using stratified k-fold cross-validation and confusion matrix analysis; improved accuracy through systematic feature engineering on landmark coordinate geometry and inter-joint distance ratios.

TECHNICAL SKILLS

AI/LLM Engineering	LLM APIs (Anthropic Claude, OpenAI GPT-4o, Groq) · LangChain · RAG Pipelines · Prompt Engineering · Agent Workflows · Sentence Transformers · FAISS · Embeddings · Vector Search · PyTorch · TensorFlow · Scikit-learn · OpenCV · MediaPipe
Full Stack	Next.js 15/16 · React · TypeScript · FastAPI · Python · Prisma ORM · Tailwind CSS · Framer Motion · REST API Design · PWA
Databases & Infra	Supabase · PostgreSQL (Neon serverless) · FAISS · MySQL · Vercel · Google Cloud (Vertex AI, Cloud Run)
Auth, State & DevOps	GitHub OAuth · NextAuth.js · JWT · Zustand · Git · GitHub Actions · CI/CD · Turbopack
Languages	Python · TypeScript · JavaScript · SQL · HTML/CSS

EDUCATION

B.Tech – Computer Science & Engineering (AI/ML)	2023 – 2027 (Expected)
Vidya Jyothi Institute of Technology, Hyderabad	CGPA: 8.01 / 10

ACHIEVEMENTS & CERTIFICATIONS

-
- **Smart India Hackathon (SIH):** Selected to represent college at SIH — national-level government hackathon with 100,000+ participants.
 - **Google Cloud & Generative AI Fundamentals:** Google-certified programme covering Vertex AI, prompt engineering, and cloud ML deployment on GCP.
 - **Google Cloud Jam Session:** Completed hands-on labs deploying scalable applications and managing GCP cloud resources.
-
